

OUR ENERGY POLICY

We, at Mandarin Oriental Bosphorus, Istanbul,

Are committed to reducing energy consumption throughout our organization while continually enhancing our energy performance. To achieve this, our aim is to decrease energy intensity and raise awareness of energy efficiency across our operations.

In pursuit of these objectives, we will prioritize the implementation of the ISO 50001 Energy Management System standard. We will ensure that all requirements of this standard are meticulously adhered to, utilizing all necessary resources and information. Furthermore, we will engage in a continuous improvement process to effectively realize these goals.

Additionally, by reviewing it regularly, we commit;

- To decrease energy costs by optimizing energy efficiency and intensity across all operational processes,
- To strive to become the industry leader in energy efficiency by consistently monitoring advancements in technology and refining energy management practices,
- To foster continuous employee development in energy efficiency through ongoing training and an open communication management approach,
- To ensure compliance with relevant national and international energy legislation, standards, and obligations,
- To utilize energy and natural resources efficiently across all activities, with a focus on continuous improvement through energy efficiency studies and projects.
- To ensure transparency and accountability by employing reliable methods for energy measurement, evaluation, and reporting,
- To provide all the necessary information and resources to achieve our energy performance targets effectively,
- To prioritize the procurement of energy-efficient products and services, allocating a dedicated budget for necessary enhancements,
- To incorporate energy performance considerations into the design and revision processes of our facilities, equipment, and procedures,
- To reduce reliance on fossil fuels by maximizing opportunities for energy production through renewable sources,
- To integrate the documented Energy Management System into corporate management practices, ensuring regular review and refinement of targets as required.
